**Part 1: Highlights of the WUDAPT Decade**  
**Part 2: Exploring WUDAPT-CMAS Collaborations**

**An Urban Focus!**

World Population  
2000 > 1/2 Urban  
2050 ~ 2/3 Urban  
2100 > 3/4 Urban

**Enabling Urban Canopy Based Modeling, Worldwide  
Addressing Intraurban Climate Change Risks  
“Future City “ Prospectives**

# From Baklanov CMAS 2022 Plenary Modeling Tools needed!

## Hazards and Risks in the Urban Environment

- Poor air quality and peak pollution episodes
- Extreme heat/cold and human thermal stress
- Hurricanes, typhoons, extreme local winds
- Wild fires, sand and dust storms
- Urban floods
- Sea-level rise due to climate change
- Energy and water sustainability
- Public health problems caused by the previous
- Climate change: urban emissions of GHG
- Domino effect:** a single extreme event can lead to new hazards and a broad breakdown of a city's infrastructure

## WUDAPT: A framework and infrastructure for "Fit for Purpose" urban applications

Urban areas are composed of aggregates of various 3-D morphological structures, impervious surfaces, and natural biota, responsible for creating canopy boundary layers.

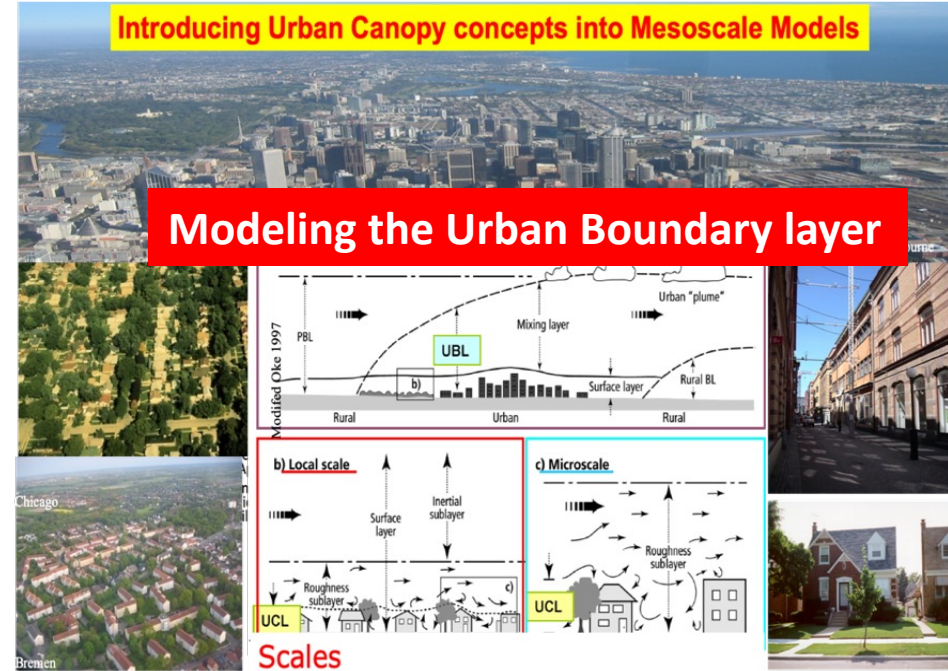

Urbanization, population growth, and climate changes exacerbate a variety of risks.

Modeling treatments of canopy flows for Fit-for-Purpose (FFP) modeling can be treated with scale dependent sets of urban parameterizations (UCPs) and appropriate Form and Functional data.

WUDAPT'S goal is to generate such data on worldwide bases and an infrastructure for both generating appropriate data and supporting model implementation.

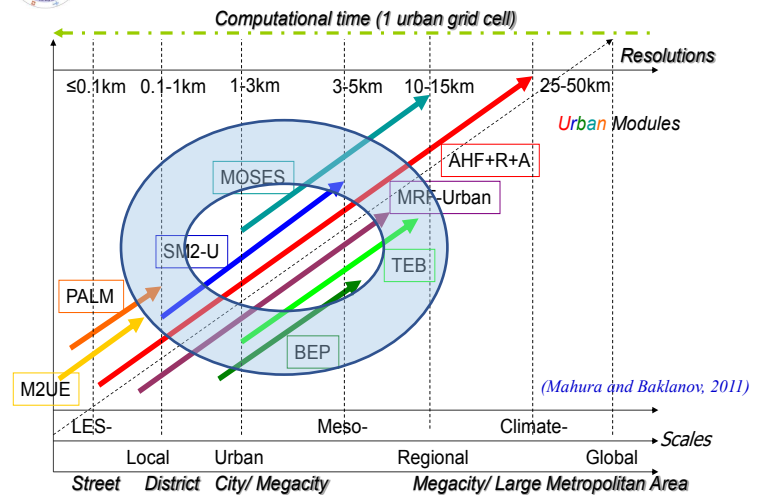

## Introducing Urban Canopy concepts into Mesoscale Models

## Modeling the Urban Boundary layer

## Hierarchy of Urbanization Approaches

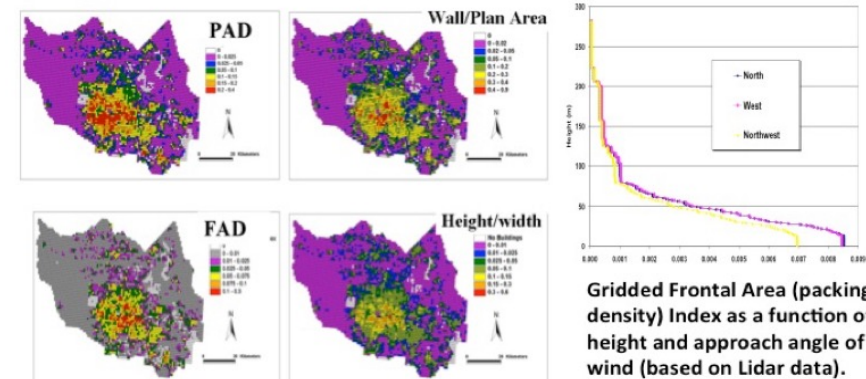

Urban canopy schemes for different type & scale models:

## NOTEWORTHY!

## Each grid has unique set of UCPs

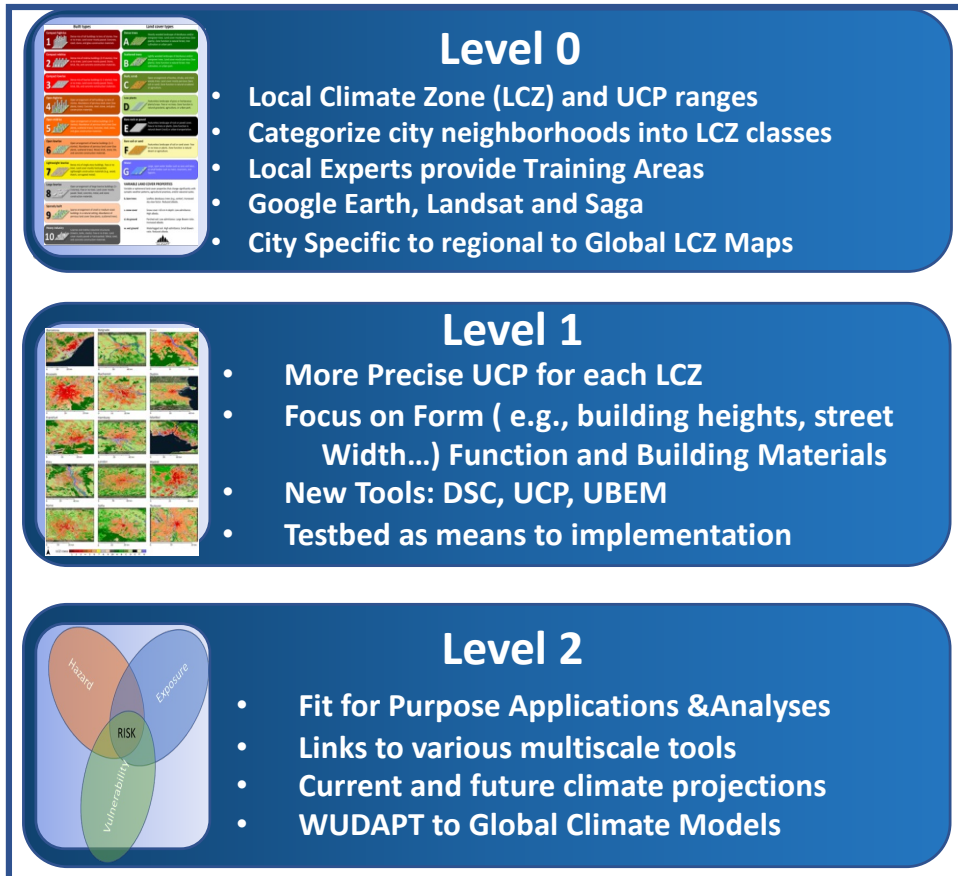

Example UCPs in NUDAPT for Harris County-Houston  
1 km gridded fields from processed digitized lidar data

Gridded Frontal Area (packing density) Index as a function of height and approach angle of wind (based on Lidar data).

# WUDAPT Strategic “Prospective” Approach

## Current Strategy

## BACKGROUND PERSPECTIVES

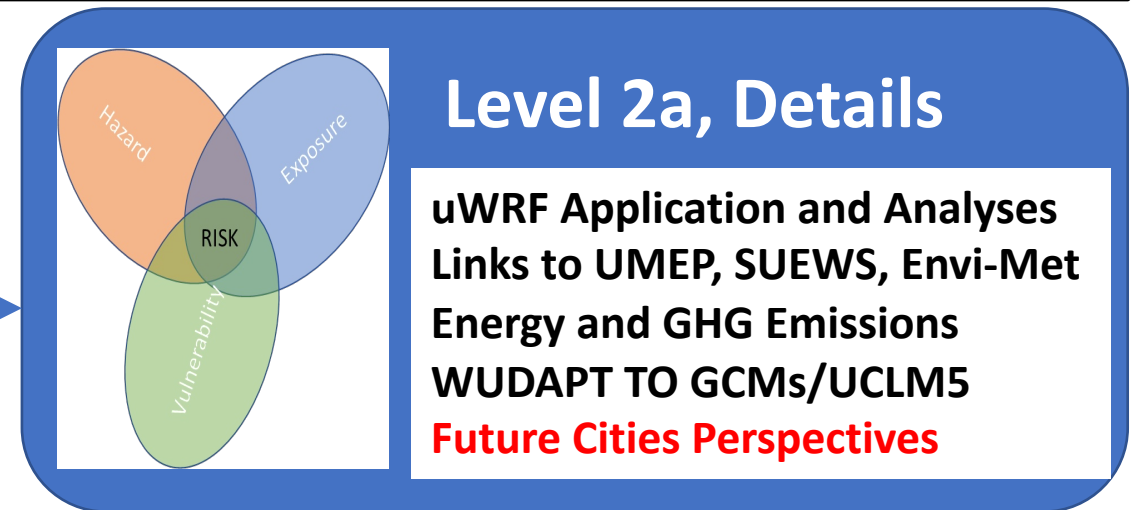

Prospective context: Future state projections  
CMAQ, WRF, Emissions systems capable of Retrospective, Current and Prospective Modeling

## RATIONALE and Synergisms

Issues & Impacts: enhanced risks, climate change, urbanization and AQ GHG Emission, Environmental Justice, Risk on various jurisdictions, Local, State, Nation states, Global basis  
Cost-benefit requirements of urban renewal and growth on jurisdictional scales

## STRATEGIC THEMATIC APPROACH

WUDAPT, Tools, Portal, and Testbed explore “What if”  
Future City Design (Level 2)  
Rationale, Synergism of climate change and urbanization on from neighborhoods to global basis  
CMAS explore scoping studies based on Future City options

Urban (1–10) and natural (A–G) Local Climate Zone definitions  
(adapted from Table 2 in Stewart and Oke *et al.* 2010)

**Level 0 Paradigm:**  
Generate maps based on  
**Local Climate Zone Classification Scheme**  
and **Lookup Table of UCPs for each LCZ class**

Built types		Land cover types	
<b>1</b> 	<b>Compact highrise</b> Dense mix of tall buildings to tens of stories. Few or no trees. Land cover mostly paved. Concrete, steel, stone, and glass construction materials.	<b>A</b> 	<b>Dense trees</b> Heavily wooded landscape of deciduous and/or evergreen trees. Land cover mostly pervious (low plants). Zone function is natural forest, tree cultivation or urban park.
<b>2</b> 	<b>Compact midrise</b> Dense mix of midrise buildings (3–9 stories). Few or no trees. Land cover mostly paved. Stone, brick, tile, and concrete construction materials.	<b>B</b> 	<b>Scattered trees</b> Lightly wooded landscape of deciduous and/or evergreen trees. Land cover mostly pervious (low plants). Zone function is natural forest, tree cultivation, or urban park.
<b>3</b> 	<b>Compact lowrise</b> Dense mix of lowrise buildings (1–3 stories). Few or no trees. Land cover mostly paved. Stone, brick, tile, and concrete construction materials.	<b>C</b> 	<b>Bush, scrub</b> Open arrangement of bushes, shrubs, and short, woody trees. Land cover mostly pervious (bare soil or sand). Zone function is natural scrubland or agriculture.
<b>4</b> 	<b>Open highrise</b> Open arrangement of tall buildings to tens of stories. Abundance of pervious land cover (low plants, trees). Concrete, steel, stone, and glass construction materials.	<b>D</b> 	<b>Low plants</b> Featureless landscape of grass or herbaceous plants/crops. Few or no trees. Zone function is natural grassland, agriculture, or urban park.
<b>5</b> 	<b>Open midrise</b> Open arrangement of midrise buildings (3–9 stories). Abundance of pervious land cover (low plants, scattered trees). Concrete, steel, stone, and glass construction materials.	<b>E</b> 	<b>Bare rock or paved</b> Featureless landscape of rock or paved cover. Few or no trees or plants. Zone function is natural desert (rock) or urban transportation.
<b>6</b> 	<b>Open lowrise</b> Open arrangement of lowrise buildings (1–3 stories). Abundance of pervious land cover (low plants, scattered trees). Wood, brick, stone, tile, and concrete construction materials.	<b>F</b> 	<b>Bare soil or sand</b> Featureless landscape of soil or sand cover. Few or no trees or plants. Zone function is natural desert or agriculture.
<b>7</b> 	<b>Lightweight lowrise</b> Dense mix of single-story buildings. Few or no trees. Land cover mostly hard-packed. Lightweight construction materials (e.g., wood, thatch, corrugated metal).	<b>G</b> 	<b>Water</b> Large, open water bodies such as seas and lakes, or small bodies such as rivers, reservoirs, and lagoons.
<b>8</b> 	<b>Large lowrise</b> Open arrangement of large lowrise buildings (1–3 stories). Few or no trees. Land cover mostly paved. Steel, concrete, metal, and stone construction materials.	<b>VARIABLE LAND COVER PROPERTIES</b> Variable or ephemeral land cover properties that change significantly with synoptic weather patterns, agricultural practices, and/or seasonal cycles.	
<b>9</b> 	<b>Sparsely built</b> Sparse arrangement of small or medium-sized buildings in a natural setting. Abundance of pervious land cover (low plants, scattered trees).	<b>b. bare trees</b>	Leafless deciduous trees (e.g., winter). Increased sky view factor. Reduced albedo.
<b>10</b> 	<b>Heavy industry</b> Lowrise and midrise industrial structures (towers, tanks, stacks). Few or no trees. Land cover mostly paved or hard-packed. Metal, steel, and concrete construction materials.	<b>s. snow cover</b>	Snow cover >10 cm in depth. Low admittance. High albedo.
		<b>d. dry ground</b>	Parched soil. Low admittance. Large Bowen ratio. Increased albedo.
		<b>w. wet ground</b>	Waterlogged soil. High admittance. Small Bowen ratio. Reduced albedo.

**UCP values associated with LCZ classes**

LCZ	$\lambda_B$	$\lambda_T$	$\lambda_V$	H	SVF	AHF	IMD
1. Compact high-rise	40–60	40–60	<10	>25	0.2–0.4	50–300	>80

# LCZ Methodology

Local Experts identify set of Training Areas for each city

Create Maps based on TAs.

Create maps based on LCZ Generator

Stewart & Oke, 2012

## Level 0 WUDAPT data

The Local Climate Zone (LCZ) classification provides a scheme for describing the basic physical geography of cities suited to further data gathering.

It can be used as a *sampling frame* to gather more detailed urban data (e.g. building materials, cooking fuel, etc.) at more detailed spatial scales.

# Lookup Tables provide Range of Model Parameters Values associated with Local Climate Zones from WUDAPT Level "0"

## LCZ 1 COMPACT HIGHRISE

**DEFINITION**  
*Form:* Dense and irregular mix of tall buildings to 10s of stories. Buildings close-set, free-standing. Sky view from street level significantly reduced. Streets paved. Buildings of steel, concrete, and glass construction. Little or no previous ground. High space heating/cooling demand. Heavy traffic flow. *Function:* Commercial (office buildings, highrise hotels); residential (apartment towers). *Location:* City core ("downtown," central business district). Periphery (highrise subcentre, highrise sprawl). *Correspondence:* UCZ1 (Oke, 2004); Dc1 and Dc8 (Ellefsen, 1990/1).

## LCZ 6 OPEN LOW-RISE

**DEFINITION**  
*Form:* Small buildings 1-3 stories tall. Buildings detached or attached in rows, often in grid pattern. Sky view from street level slightly reduced. Construction materials vary (wood, brick, stone, tile). Scattered trees and abundant plant cover. Low space heating/cooling demand. Low traffic flow. *Function:* Residential (single or multi-unit housing, low density terrace/row housing); commercial (small retail shops). *Location:* City (medium density); periphery ("suburbs"). Commuter towns. Rural towns. *Correspondence:* UCZ5 (Oke 2004); Do3 (Ellefsen 1990/91).

## Level 1&2: Computing scale dependent Urban Canopy Parameters (UCPs) given digitized urban morphology from High-Res Google type satellite imagery based on WUDAPT's Digital Synthetic City (DSC) tool

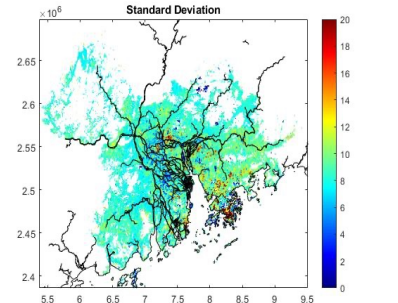

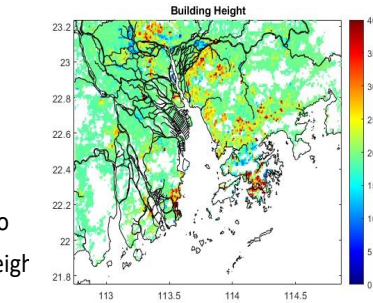

DSC digitizes urban features

Therefore: UCPs can be generated for each and all grids in domain & Grid size is a user choice

## Examples using Level 1 UCP Tool

- Building Height
- Plan area ratio
- Building surface to plan area ratio
- Standard deviation of building height
- Urban Fraction

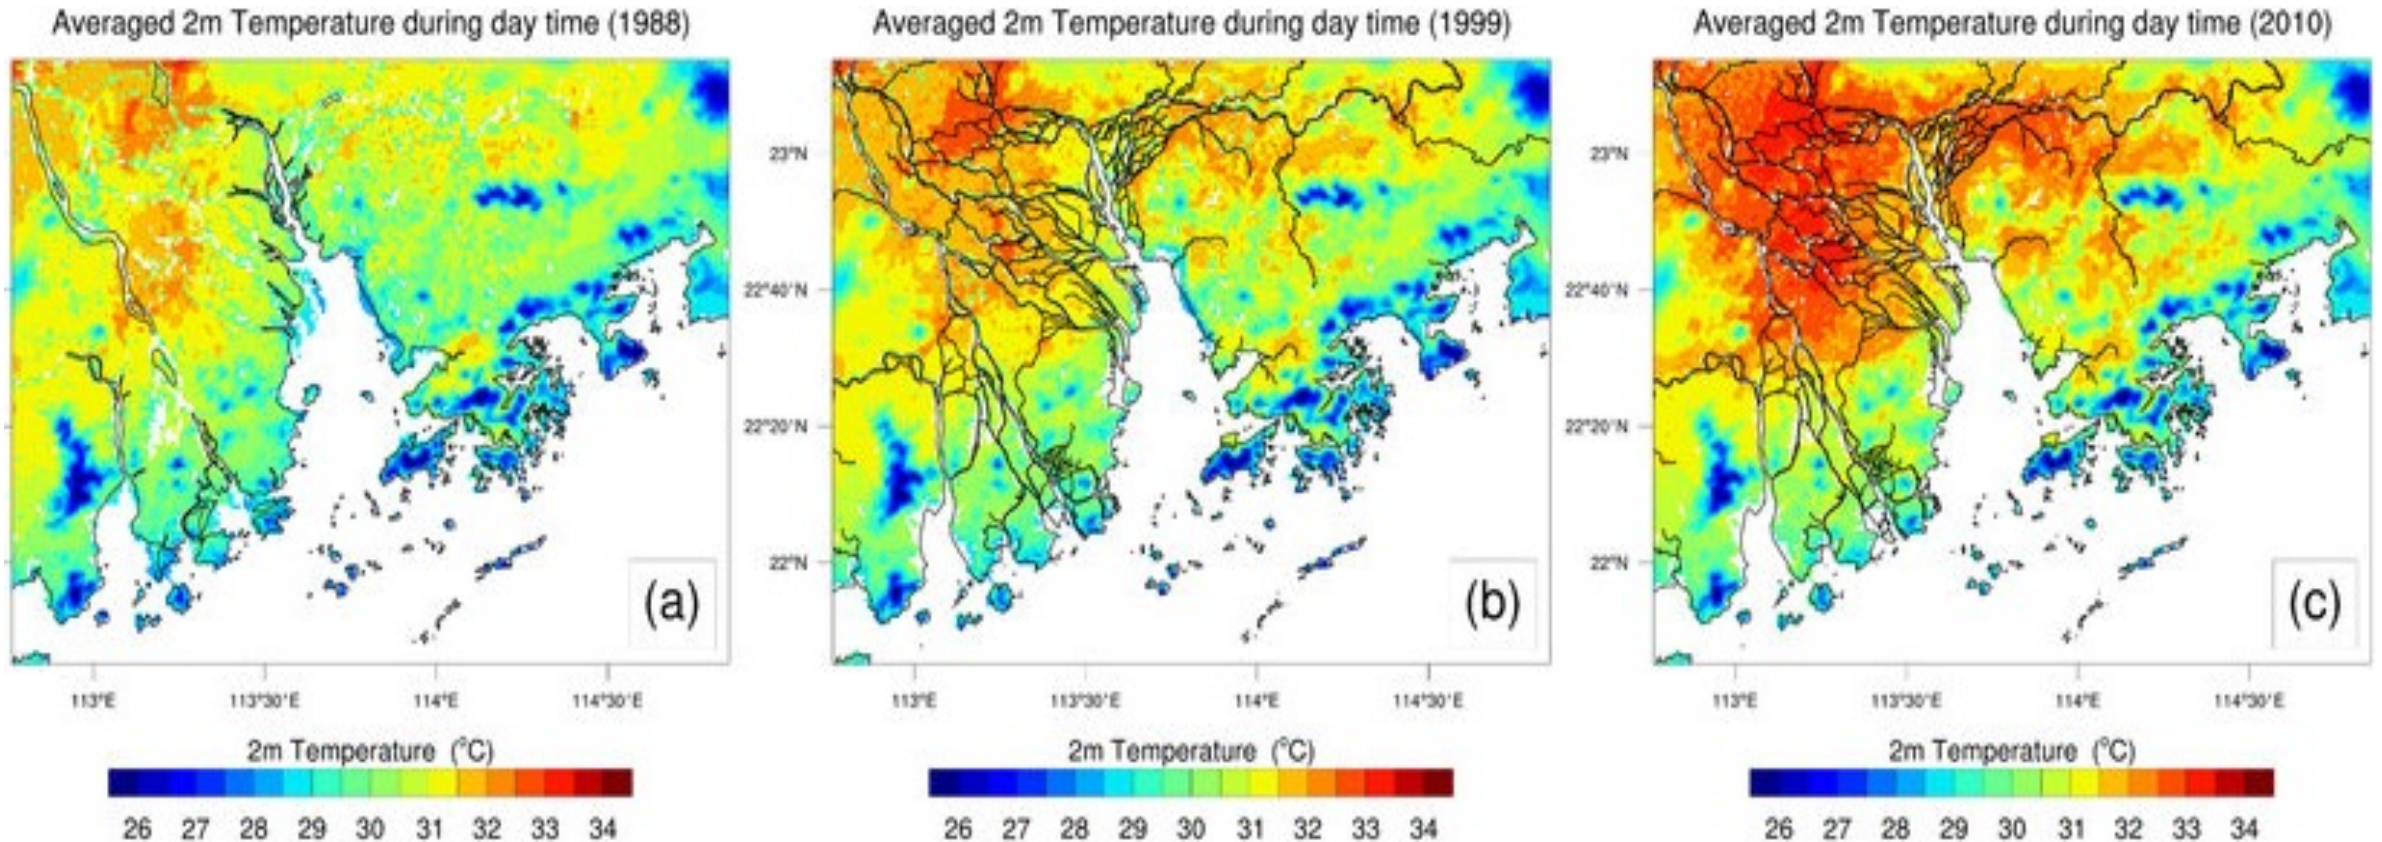

WUDAPT tool for generating level 1&2 form-based UCPs (courtesy of M. Wong)

# Part 2: OVERVIEW of WUDAPT & CMAS collaborations

- **Urbanization:**
  - Population of Urban Areas >50% in 2200; Projected 75%^ in 2275
  - Major source of air polluting and GHG emission
- **WUDAPT (2012-22-00) LCZ-UCP capable of simulating Wx at urban (1km) and intraurban (100m) scales**
  - IAUC and AMS Community collaborations
  - **Generates maps of LCZ and UCPs (Note that such maps change with time (see wrf modeling for PRD))**
  - City maps worldwide has unique LCZ, UCPs signatures
  - Preprocessor to CMAQ, WRF-CHEM, etc
- **Model applications**
  - **Climate Change induced Extreme Risks**
    - Extreme heat, Urban flooding modeling, Drought
    - Regional contexts
  - **Policy: Environmental Justice issues an EPA-ORD Priority**
  - **Urban growth Projections and Urban planning, Scenerios Design Sustainability, Resilience,**
- **Modeling links (Fine scale AQ to street level exposure)**
  - UMEP
  - Envi-Met
  - ADMS to Exposure modeling- link WUDAPT to Street level exposure modeling (ADMS, SinG.....)
- **Anticipated Climate modeling**
  - Ready to engage with Global LCZ map
  - Incorporate into EASM-UCLIM pending
  - RCP projections

uWRF daytime 2.5 m temperature simulation showing urbanization effect in the PRD region between 1988, 1999 and 2011 based on WUDAPT. WRF modeling setup identical except for the LCZ generated for the different years.

Jason Wai PoTse, et al., 2018: Investigation of the meteorological effects of urbanization in recent decades: A case study of major cities in Pearl River Delta, Urban Climate

# Suggested studies evaluating and utilizing WUDAPT advances relevant to CMAS community

## Summary perspectives for CMAS Relevance to Air Quality

- FFP urban and intraurban AQ modeling applications
  - Demonstrate and explore application as design templates of applying CMAQ at local scales
  - Running CMAQ with MPAS, or regular grid system
  - Performing SinG-type modeling for AQ exposure modeling
- Siting WX and AQ observations in context of LCZ
- Prospective of future city design
- Design Applications for supporting Environmental Justice
- Incorporating WUDAPT into GCMs
- Training for links to running WUDAPT to AQ FFP applications
- Advancing further discussions vis WUDAPT Forum

## uWRF To Climate, Air Quality

- Preprocessor to CMAQ
- CMAQ & CMAS Regional and intra- Urban Assessments
  - Smoke and dust transport
  - Environmental Justice
  - Extreme event (Heat, Flooding...)
  - Urban planning Support
    - Urban design (Future Cities)
    - Greening scenerios
    - Urbanization
- UBEM Emission characterizations
  - GHG
  - Anthropogenic Heating
- Street level Exposure Modeling
  - ADMS Prototype
  - SinG Prototype

# Comments and Questions !

- For Further Details [www.wudapt.org](http://www.wudapt.org)
- Consider contributing the SI Urban Climate for **prototype FFP applications**
- Contribute to **methods development and testing**
- Become **testbed collaborators**
